

Optec Fortified Infrastructure

A New Way to Secure and Manage your Network

Simplify and secure your network infrastructure, without breaking your budget

With 43% of today's cyber attacks targeting SMBs, cyber security is no longer a topic that SMBs can ignore. At the same time, more than half of all companies have adopted flexible working practices, necessitating the need for high-performance connectivity and enhanced data security across distributed teams.

For today's SMBs, network security and performance has never been more important. However, the process of scoping, selecting, procuring and managing the right network infrastructure can be a difficult and time-consuming task. Additionally, your infrastructure needs to be continually monitored and managed to effectively stop cyber attacks and prevent downtime - all of which requires time, resources and manpower, which could be better allocated to larger-scale and more immediate IT projects.

With **Optec Fortified Infrastructure**, we'll do the heavy lifting, allowing you to be more productive, secure and shift your team's focus back to where it's needed most. Optec Fortified Infrastructure simplifies network management by combining industry-leading hardware with our in-house security expertise - all for an affordable, transparent monthly rate.

Secure networking, as-a-service

At the centre of any network solution is the ability to keep employees connected and safe from cyber attacks. With Optec Fortified Infrastructure, gaining access to enterprise-level IT security and network solutions has never been easier. Like other "as-a-service" models, Optec Fortified Infrastructure provides you with everything you need to secure your network - all for a flat, affordable monthly subscription fee.

Designed specifically for SMBs, Optec Fortified Infrastructure combines FortiGate Next-Generation Firewall (NGFW) security with the knowledge and expertise of our in-house NSE 7 trained Fortinet security engineers to give you a fully managed and monitored networking and security solution. It's everything you need to keep your network secure and connected, just without the complexity, cost or resources required to manage it internally.

- **Easy set-up and installation:** Based on your network requirements, we'll send you the required hardware - pre-configured and ready to install. Simply follow the instructions for installation and give us a call to confirm you're online and set up correctly.
- **Proactive monitoring and management:** Once you're set up, our Optec engineers will proactively monitor your network and appropriately respond to any threat, performance or functionality issues that may arise to ensure your business is always protected.
- **Daily configuration backup and restoration:** We'll perform daily configuration backups (encrypted and stored securely in our UK-based data centre), provide advice on latest firmware updates, and restore appliance configuration in case of a hardware failure.
- **Annual health check:** We'll perform daily configuration backups (encrypted and stored securely in our UK-based data centre), provide advice on latest firmware updates, and restore appliance configuration in case of a hardware failure.
- **Online customer portal:** We'll perform daily configuration backups (encrypted and stored securely in our UK-based data centre), provide advice on latest firmware updates, and restore appliance configuration in case of a hardware failure.

Worry about one less thing with Optec Fortified Infrastructure

Spend more time focused on critical IT projects, and let us worry about your IT infrastructure. As experienced network security engineers and a Fortinet Advanced Partner, we know what it takes to keep your business secure and running smoothly.

Simply choose the right plan for your business size, and we'll send you your Fortinet kit in the post with easy-to-follow installation instructions. Once you're set up, we'll get to work protecting your data and enabling safe access to the cloud. Managing your IT infrastructure has never been easier.

| Tier 1 1-15 users | Tier 2 16-30 users | Tier 3 31-60 users |
|---|---|--|
| Includes Fortigate 60-F from £69.99/month | Includes Fortigate 80-F from £120/month | Includes Fortigate 100-F from £250/month |

Key Benefits

- Simple, predictable pricing
- Easy set-up and configuration
- Scale as you need
- Fully remote set up and monitoring

Key Features

- High performance connectivity across distributed teams
- 24/7 monitoring and management of network infrastructure
- Daily configuration backups
- Annual health checks
