

XDR-as-a-Service

Stop cyberattacks in their tracks with fully managed extended detection and response.

XDR (Extended Detection and Response)-as-a-Service monitors your data centre to prevent security breaches and data loss from modern multi-stage cyberattacks. **Optec's XDR-as-a-Service (XDRaaS) solution**, powered by Confluera, brings enhanced visibility, real-time story boarding and unparalleled detection accuracy.

Rather than identifying security events on endpoints, networks or in email, XDRaaS lives in your data centre so it can gather and correlate all these events across various security controls, such as anti-virus software, firewalls, and intrusion detection. XDR can prevent the attackers from accessing, destroying and stealing one of your organizations most important assets - your data.

At Optec, we've partnered with Assured Data Protection to provide our customers with enhanced data protection services across multiple data streams through a fully managed XDR solution.

How It Works

Cyber Resilience Framework

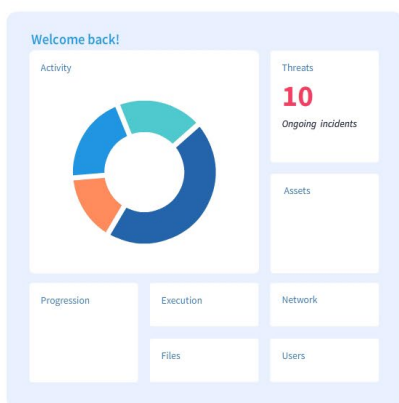

- **Identify** all business-critical assets, systems and data
- **Protect** critical infrastructure services with first-line security programmes
- **Detect** strange events and suspected data breaches or data leaks before major damage occurs
- **Respond** to a detected security breach or failure that involves end-to-end incident response pla
- **Recover** to restore any affected infrastructure, capabilities or services that were compromised

XDR for Cloud Workloads

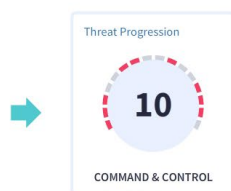

POWERED BY CONTINUOUS ATTACK GRAPH

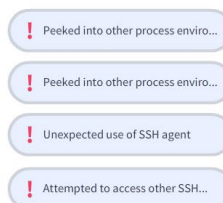

Typical Remediation Workflow

The system detects a threat and notifies the dashboard

Command and control shows the stitched attack stages and the movement progression

Stitched attack phases shown in the dashboard threat progression

No ADP Support
Handled by customers internally

Weekly and monthly reports

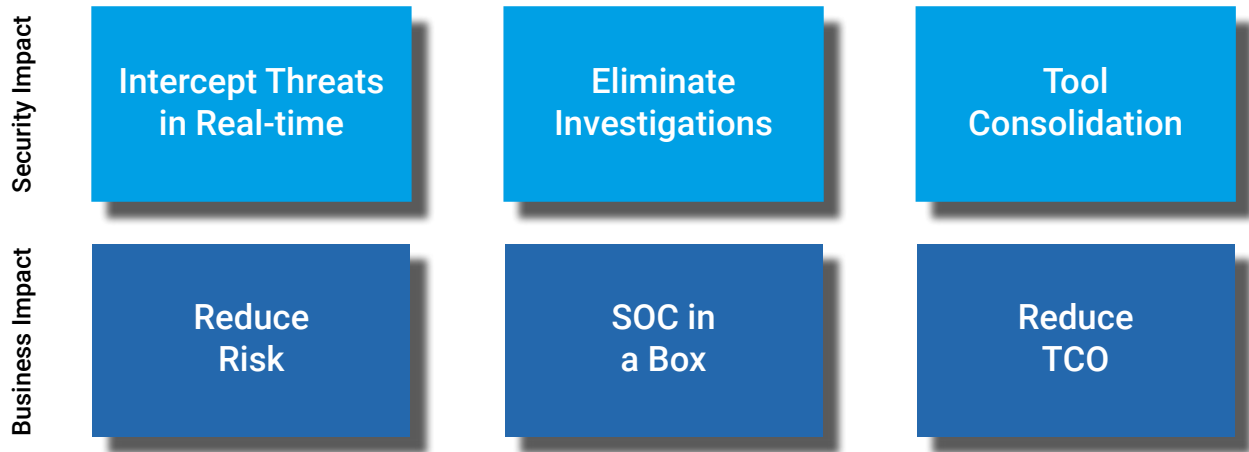

24/7 Help and Support

Why Choose XDR-as-a-Service?

Our XDRaaS solution is all about service. All of our customers receive a dedicated account manager to ensure a high quality service from implementation through to daily proactive support. The account manager is supported by an implementation team, and then transitioned seamlessly to our global support.

XDR-as-a-Service Key Benefits:

Next-Gen Core Infrastructure Protection

Available Service Levels

	Supply and Install	Standard Managed Service	Premium Managed Service
